

### Revision Thu:

1. Now modify your program in part 1. In geometry, an equilateral triangle is a triangle in which all three sides have the same length. You are expected to take the equilateral triangle's side length as an input and display the area, circumference, and the height of the given triangle.
2. Now in addition to what is printed out in part 3, first define and initialize a string as "Pride & Prejudice". Then write the code that will change this string to "**PrejuDice and PriDe**" and display it on the console.
